Category:Standardised tests in India Category:Science and technology in IndiaQ: "Convert" bytes to uint16\_t in C++. Do I need to use macros? Hi I have a client-server application with pure C++ and sockets. I've got a problem with reading integers from a socket. A client sends integer numbers in 4 bytes and I'm only able to get 2 bytes (byte[0] and byte[1] - unsigned short). That's why I need to convert the bytes to uint16\_t or int16\_t. This is what I've done but I don't like that. Can I somehow "convert" the bytes into uint16\_t or maybe I should first send 1 byte and then 2. This would be the preferable way. I'm using gcc and the following code. uint16\_t getInt16(void \*sockdata, int \*len) { uint16\_t res; uint8\_t temp; memcpy(&temp, sockdata, 2); res = (temp

A: You could use lxml: from lxml import etree root = etree.Element('root') nodes = [ Element('heading', children=[ Element('paragraph', children='text text text text text text'), Element('paragraph', children='text text text text text text') ]) ] root.append(nodes) tree = etree.ElementTree(root) tree.write('test.xml')

Q: How to set a property in an other class? I know that in the same class there is no problem to set a property and I am able to use it.

```
public partial class Signin : System.Web.UI.Page { public string Email = ""; In another class I try to set the same property. public partial class Person : System.Web.UI.Page { public Person() { InitializeComponent(); } private Signin signin = new Signin(); protected void Page_Load(object sender, EventArgs e) { Signin.Email = ""; Button4.Text = "login"; Button4.Enabled = false; } } When I run it I get the error: The name 'Email' does not exist in the current context A: You need to store it as a static property, because you can't access any instance properties from a static method. Techweekz | 2018-03-11 To be truly connected, within a company or organizational network, one must first have access to the data. In 2018, data is power, but when you are trying to establish a connection, it is easy to forget how difficult
```
